

Three-Body Interactive Platform

Dialogue with memory, ideology, and consequence.

A Book I narrative interface where four Claude personas remember the same player and steer toward different endgames.

MEMORY

TIMELINE

IDEOLOGY

A story system, not just a chatbot.

The player moves between interviews, but the world keeps one shared state.

4 voices

Ye, Wang, Shi, Evans each argue from a different moral frame.

1 memory

Every choice writes to shared localStorage continuity.

10-turn events

The World Book timeline forces external pressure.

4 endings

Alignment decides the endgame after turn six.

One player line becomes six consequences.

The model does not own event timing. Forced timeline events and ending checks are deterministic app state.

The player is scored by worldview.

Adventist

Humanity is failed. Trisolaris is correction.

Redemptionist

Trisolaris is godlike. Service outranks sovereignty.

Survivor

Save mine first. The species is negotiable.

Frontier

Investigate, resist, protect ordinary human life.

The cast is an argument.

Ye Wenjie

ORIGIN WOUND

Founder, betrayer, witness. Not a simple Adventist.

Wang Miao

EVIDENCE

Frontier scientist. Fearful because normal life matters.

Shi Qiang

PROTECTION

Frontier pragmatist. People first, theory later.

Mike Evans

EXTINCTION

Hard Adventist. Pan-species ethics turns anti-human.

Ye Wenjie changes with turn pressure.

Her ideology is modeled as an arc, not a fixed faction label.

The world, not a character, controls escalation.

Shared memory

All agents know the player's broad record.

Forced timeline

Every ten turns, the World Book advances.

No pop-up events

Characters cannot trigger scene or guest events.

Auto compact

Every five turns, context compresses without counting as a turn.

Ending gate

Checks begin after turn six with axis threshold seven.

Rewind

Decision snapshots keep branches replayable.

Demo: endings as ideological consequences.

Walkthrough

One possible endgame path from interview to resolution.

Goal: stop the destruction of the human world.

The system makes that hard by making every belief travel across memory, time, and character ideology.
